

## Introducing LaClaro Lighthouse: A reporting & workflow tool that redefines how you'll manage your revenue cycle.

It seems like everyone today wants to claim they are a revenue cycle management company. At LaClaro, we began years ago by focusing solely on the revenue cycle. Our Lighthouse reporting suite and unique toolset puts you in control of your revenue cycle no matter who does your billing. In our experience, **whoever has the best data wins**, and getting that data into the hands of your collectors and decision makers is our top priority.

- **Ease of use**

Lighthouse is entirely point and click with no special data analysis skills required. Your current billing system is unchanged.

- **Prerequisites**

An internet connection and browser is all that is required. All major browsers are supported including Internet Explorer, Firefox, and Chrome.

- **Training**

Minimal training required (usually just a WebEX session is all that is required); unlimited support is also included.

- **Number of Users**

Lighthouse is web-based and the number of users is managed and defined by you. There are no additional per-user fees.

- **System Updates**

Data is updated from the billing system daily.

- **Data Security**

Our data center is a Tier III facility with SAS 70 Type II certification.

- **Executive Dashboard**

Our comprehensive dashboard is updated daily and viewable online. The dashboard is visual in nature and includes trending indications as well.

- **Data Range**

Two years worth of data is extracted from the billing system nightly. The two year scope is dynamic, meaning it is always two years from yesterday.

- **Analytics Suite**

Our analytics suite includes reports applicable to contract negotiation, implant analysis, and trending data for board reporting.

- **Custom Reporting**

We want you to have the data you need, always. If you need a custom report or extract from the system, we will work with you to deliver exactly what you need at no additional charge.

- **Intended User**

Lighthouse was built specifically with collectors and managers in mind, but the reporting it offers is virtually endless and applicable to nearly any user at your ASC.

"Lighthouse acts as the perfect road map for ASC business offices. It points out the trouble spots in the billing cycle and helps you navigate around them by pointing where and when to work certain accounts."

- Business Office Manager
